Professional Summary

Solution Architect / Principal Engineer with 18 years of commercial software engineering experience. I design and deliver web platforms, frontend-heavy systems, integrations, analytical tools and complex business applications. I combine hands-on engineering with architecture ownership, technical leadership, mentoring, code review, CI/CD, quality standards, estimation and client-facing consulting. I am most useful in projects that need someone to quickly enter an unfamiliar or blocked codebase, diagnose problems and unblock delivery.

Selected Impact

- Led and mentored frontend/software engineering teams of up to 20 people, directly supporting 12–15 engineers through architecture guidance, code review and delivery problem-solving.
- Designed and implemented “Expressions”, a browser-based business expression language with parser, editor, runtime, validation, API, BDD tests and multi-format build system for SAP ecosystem products used by enterprise customers, including Fortune 500 companies.
- Designed and optimized a React/.NET analytical web application supporting financial statement audit workflows at PwC Advisory.
- Led architecture and development of a car-sharing and scooter-sharing platform as CTO / Chief Architect, enabling real business operations.
- Designed a microservices PoC and contributed to deployment of a scalable live-chat communication channel for high-traffic e-commerce.
- Supported discovery, sales and client-facing architecture work, including solution design, estimates, technical offers and delivery risk assessment.

Core Competencies

Solution Architecture	Principal Engineering	Frontend Architecture	Technical Leadership	Web Platforms	API Design	Integration A
Microservices	Modular Monoliths	Analytical Dashboards	Legacy Modernization	Performance Optimization	CI/CD	Testing Strateg
Code Review	Quality Gates					

Technical Stack

Frontend	TypeScript, JavaScript, React, Angular, Nx, Web Components, Playwright, Jest/Vitest, Canvas
Backend & Data	Node.js, PHP, Python, SQL, PostgreSQL, MySQL/MariaDB, REST, GraphQL, Message Queues
Architecture	DDD, Clean Architecture, Hexagonal Architecture, ADRs, API Design, Integration Architecture, Security-Aware Architecture
DevOps & Infra	Docker, Linux, Nginx, GitHub Actions, CI/CD, OpenTelemetry, Prometheus/Grafana, Proxmox

Professional Experience

Frontend Tech Lead / Senior Software Engineer

SoftwareHut

10.2021–08.2023, 06.2024–05.2025

Remote / Poland

- Led and mentored a team of 12–15 frontend engineers while participating in delivery projects as a senior hands-on engineer and architecture advisor.
- Designed frontend architectures, performed code reviews across own and external projects, and supported teams with expert-level frontend and web platform knowledge.
- Participated in discovery and sales meetings, prepared solution architectures, technical estimates and implementation offers.
- Frequently joined unfamiliar or blocked projects to diagnose issues, unblock implementation problems and support delivery.
- Selected work included a healthcare services directory with appointment registration integrated with a government API, and a platform for modelling and designing autonomous warehouse systems.

Senior Software Developer / Principal Frontend Engineer

Vistex Poland-CEE

04.2017–11.2021

Poland

- Designed and implemented “Expressions”, a business expression language used across enterprise planning, pricing and modelling tools distributed within the SAP ecosystem.
- Started from Excel-like expressions and iteratively evolved the language into a richer system supporting loops, cursors over datasets, dataset pointers, pattern matching and advanced business rules.
- Owned syntax design, parser implementation, browser-based editor integration, validation, runtime, public API, test strategy and a complex multi-format build system producing AMD, UMD, RequireJS, ES6 and SystemJS packages.
- Provided informal frontend technical leadership for enterprise products used by global SAP customers, including Fortune 500 companies.

Architecture and Technology Consultant

PwC Advisory

07.2019–12.2019

Poland

- Designed and optimized a React/.NET analytical web application supporting financial statement audit workflows.
- The system presented financial documents dynamically, enabled text selection and annotations, and visualized references and correlations between values across rows, pages and tables.
- Focused on solution architecture, frontend performance and usability of complex document-analysis workflows.

CTO / Chief Architect / Lead Developer

Inn4Tech / Citicar

07.2014–06.2021

Poland

- Led architecture and development of a car-sharing and scooter-sharing platform as CTO, architect and lead developer.
- Managed a 7-person team and was responsible for technology decisions, product architecture, implementation direction and delivery.
- Delivered a platform supporting real car-sharing business operations and the core software required to run the service.

Independent Technology Consultant

Luczak Consulting

09.2023–present

Łódź / Remote

Provides selected architecture and implementation consulting services for web and business platforms. Currently available for full-time employment or long-term contract engagement; consulting activity does not conflict with professional availability.

Trainer / Architecture Consultant

Symentis

11.2017–08.2023

Poland

- Delivered around 20 B2B workshops and training programs, totaling approximately 160 hours for about 100 unique participants, from junior developers to architects.
- Responsible for needs analysis, training scope definition, content preparation and delivery.
- Provided architecture and engineering consulting beyond training engagements, supporting teams in software design, project practices and technical decision-making.

Senior Fullstack Developer

STX Next

03.2016–03.2017

Poland

- Worked in a 20-person delivery environment on data-heavy web systems, including an analytical dashboard for quant developers and a migration of a pension fund management solution from Oracle Forms / legacy environment to a modern web application.
- Focused on full-stack implementation, data integration, performance and maintainability using Python and JavaScript.

Senior Software Developer / Solution Architect
Focus Telecom Polska

10.2014–02.2016
Poland

- Designed architecture and prepared a microservices PoC for a new customer communication channel.
- Contributed to implementation and deployment of a live-chat solution capable of handling traffic from a large e-commerce website and competing with dedicated live-chat platforms.
- Worked with PHP, Symfony, Propel, PostgreSQL and Node.js in a 16-person team.

Senior Software Developer / Solution Architect
Ericpol

09.2012–09.2014
Poland

- Designed and led frontend implementation for a web platform supporting application, assessment and processing workflows for cross-border funding programs.
- Led a 6-person implementation team and delivered a web panel with a dynamic reporting module allowing users to define reports at runtime.
- Worked with PHP, JavaScript and Java.

Programmer & Administrator / Developer
Lodz University of Technology

07.2007–08.2014
Łódź, Poland

- Designed, developed and maintained university support systems.
- Developed the EECS Student Connectivity Module, a distributed system for secure student data exchange between universities with electronic document workflow support.

Education, Research and Certifications

- **PhD Candidate, Information and Communications Technologies**, Lodz University of Technology, 2022–present. Research: models and algorithms for traffic management in multipath network transmission.
- **M.Sc., Electronics and Telecommunications**, Lodz University of Technology, 2004–2012. Specialty: Signal and Image Processing.
- **Researcher**, National Science Centre, Poland, 03.2023–01.2025. Project no. 2021/41/B/ST7/00108: Robust Control Solutions for Multi-Channel Networked Flows.
- **Internal Auditor of Information Security Management System**, PN-EN ISO/IEC 27001:2017, Dekra, 2020.
- **Internal Auditor of Integrated Management System**, ISO 9001:2015, ISO 14001:2015 and ISO 45001:2018, Dekra, 2019.

Publications, Teaching and Community

- Peer-reviewed publications on MPTCP congestion control, streaming QoS and multipath transmission, including Future Internet, FedCSIS, EuroSPI2 and Annals of Computer Science and Information Systems.
- Lecturer at Uniwersytet Dolnośląski DSW, 10.2023–09.2025: Magento, Python and Cybersecurity.
- Speaker and workshop host at Polish IT conferences and meetups, including 4Developers, SegFault, Warsaw IT Days, meet.js and ByteBay.
- Program committee member for 4Developers tracks: JavaScript, Application Architectures, Frontend and Databases.
